

Intel® corporate brand identity guidelines

"A corporation is a living organism; it has to continue to shed its skin. Methods have to change. Focus has to change. Values have to change. The sum total of those changes is transformation."

Andrew Grove

The Intel brand

Great and successful companies are built on strong brands. A strong brand is the essential springboard that thrust a company forward, being the decisive asset to build customer loyalty and giving a competitive edge. A strong brand resides within the hearts and minds of customers, clients and prospects. It is the total sum of their experiences and perceptions, which are the ultimate target of an efficient branding strategy.

When the essence of a brand is understood within a company, it can serve as a source of inspiration, excitement, and employee satisfaction. Ultimately, a strong brand is the catalyst for business growth. Ideally, the perception of Intel our actual or potential customers have, should align with our own vision and aspiration.

We strive to be essential to the global technologic community, our goal is to connect and enrich the lives of every person on earth. When our customers share that vision, our branding efforts will be successful. Our idea of Intel is a forward-moving society, already working on the next century's innovations. We can really claim to be the genuine Sponsors of Tomorrow™

Why and how to read this book

WHY

Intel has historically focused much of its marketing effort on pushing the sub-brands of its microprocessors, as well as communicating product features and the experience they can deliver. Processors, like the Pentium, are well known by everyone, but people don't necessarily know that it is an Intel product, or did not immediately associate the sub-brand with the Intel master brand. This book's intent is to go back to basics, and to bring the focus on increasing brand awareness of the Intel master brand. This tool will help lay the groundwork for a future Intel wants to be part of.

HOW

This book is a reference manual to anyone who looks after the Intel brand, caring to maintain and strengthen its perception in the world. Please strictly follow these guidelines to achieve a high level of consistency within Intel communication. A correct use of this book will help ensure that customers, members, industry professionals and other organizations, will perceive Intel as a leader in the global technology community. Should there be any question or concern on how to use these guidelines, you can find the contacts you need in the last section of the book.

History of a brand

1968

Bob Noyce and Gordon Moore found Intel

1970

Released the 1103, the first DRAM chip

1974

Intel launches the 8080 microprocessor, destined to have a huge success

1976

Intel introduce the world's first microcontroller, the 8748 and 8048

1980

Intel, with DEC and Xerox, announces the cooperative Ethernet project

100

1984

Intel is chosen as one of the "100 best companies to work for in America"

1969

The birth of Intel logo

1971

First Intel ad, to publicize its first microprocessor, the 4004

1975

The 8080 processor is used on one of the first PCs, the Altair 8800

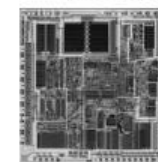

1979

Intel is named one of the "Best triumphs of the Seventies" by Fortune

1982

Intel launches the high-performance 16-bit processor, the 286

1987

Second generation supercomputer, based on 386 processor

History of a brand

1991

Intel launches the 'Intel Inside' new brand marketing campaign

1993

Intel introduces its Pentium processor

1998

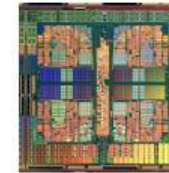

Intel releases the Intel Celeron and, one year later, the Pentium III

2002

New Intel Hyper-Threading Technology improves system performances in multitasking environments

2006

Intel delivers the world's first quad-core processor

2009

Going green. Intel is the largest buyer in the U.S. of green power, according to the U.S. Environmental Protection Agency

1992

Intel becomes the largest semiconductor supplier in the world

#1

1995

Astronauts on the Endeavor conduct the first real-time conference from space using Intel technology

2000

Intel introduces the 42-million transistor Intel Pentium 4 processor

2003

Intel announces that more than 1 million teachers are being trained through the Intel Teach to the Future Program

2007

Intel announces breakthrough 45nm process technology

2010/2012

Intel introduces a totally new Core family, based on the Nehalem microarchitecture, going from 2 to 6 cores

Brand mission, goals and values

OUR MISSION

Create and extend computing technology to connect and enrich the lives of every person on earth

OUR GOALS

Extend our silicon technology and manufacturing leadership

Deliver unrivalled microprocessors and platforms

Grow profitability worldwide

Excel in customer orientation

CUSTOMER ORIENTATION

Listen and respond to our customers, suppliers and stakeholders

Clearly communicate mutual intentions and expectations

Deliver innovative products and services

Make it easy to work with us

QUALITY

Achieve the highest standards of excellence

Do the right things right

Take pride in our work

Continuously learn, develop and improve

DISCIPLINE

Conduct business with uncompromising integrity and professionalism

Make and meet commitments

Properly plan, fund and staff projects

Pay attention to detail

RISK TAKING

Encourage and reward informed risk taking

Foster innovation and creative thinking

Embrace change and challenge the status quo

Listen to all ideas and viewpoints

Learn from our successes and mistakes

RESULTS ORIENTATION

Constructively confront and solve problems

Set challenging and competitive goals

Assume responsibility

Execute flawlessly and acquire confidence

Focus resources into the expected output

Looks for ways to add value beyond the client's immediate requests

GREAT PLACE TO WORK

Promote a challenging work environment that develops our diverse workforce

Recognize and reward accomplishments

Work as a team with respect and trust for each other

Manage performance fairly and firmly

Be an asset to our communities worldwide

The Intel brand experience

WHAT DO YOU THINK WHEN YOU THINK OF INTEL?

INTELLIGENT

QUICK RESOURCEFUL

KNOWLEDGEABLE

INFORMATIVE CLEAR

DIRECT CAPABLE

«INTEL

shows foresight and anticipates need»

is focused and thoughtful»

works according to plan»

adapts and evolves»

The Intel brand experience

INNOVATIVE

INTRIGUING CREATIVE

SURPRISING

UNIQUE ENGAGING

DYNAMIC STIMULATING

«INTEL

functions from a unique perspective»

improves on what came before»

presents things in a new light»

looks to the future»

LEADER

VISIONARY STRONG

TRUSTWORTHY

RISK-TAKING BOLD

RELIABLE EFFECTIVE

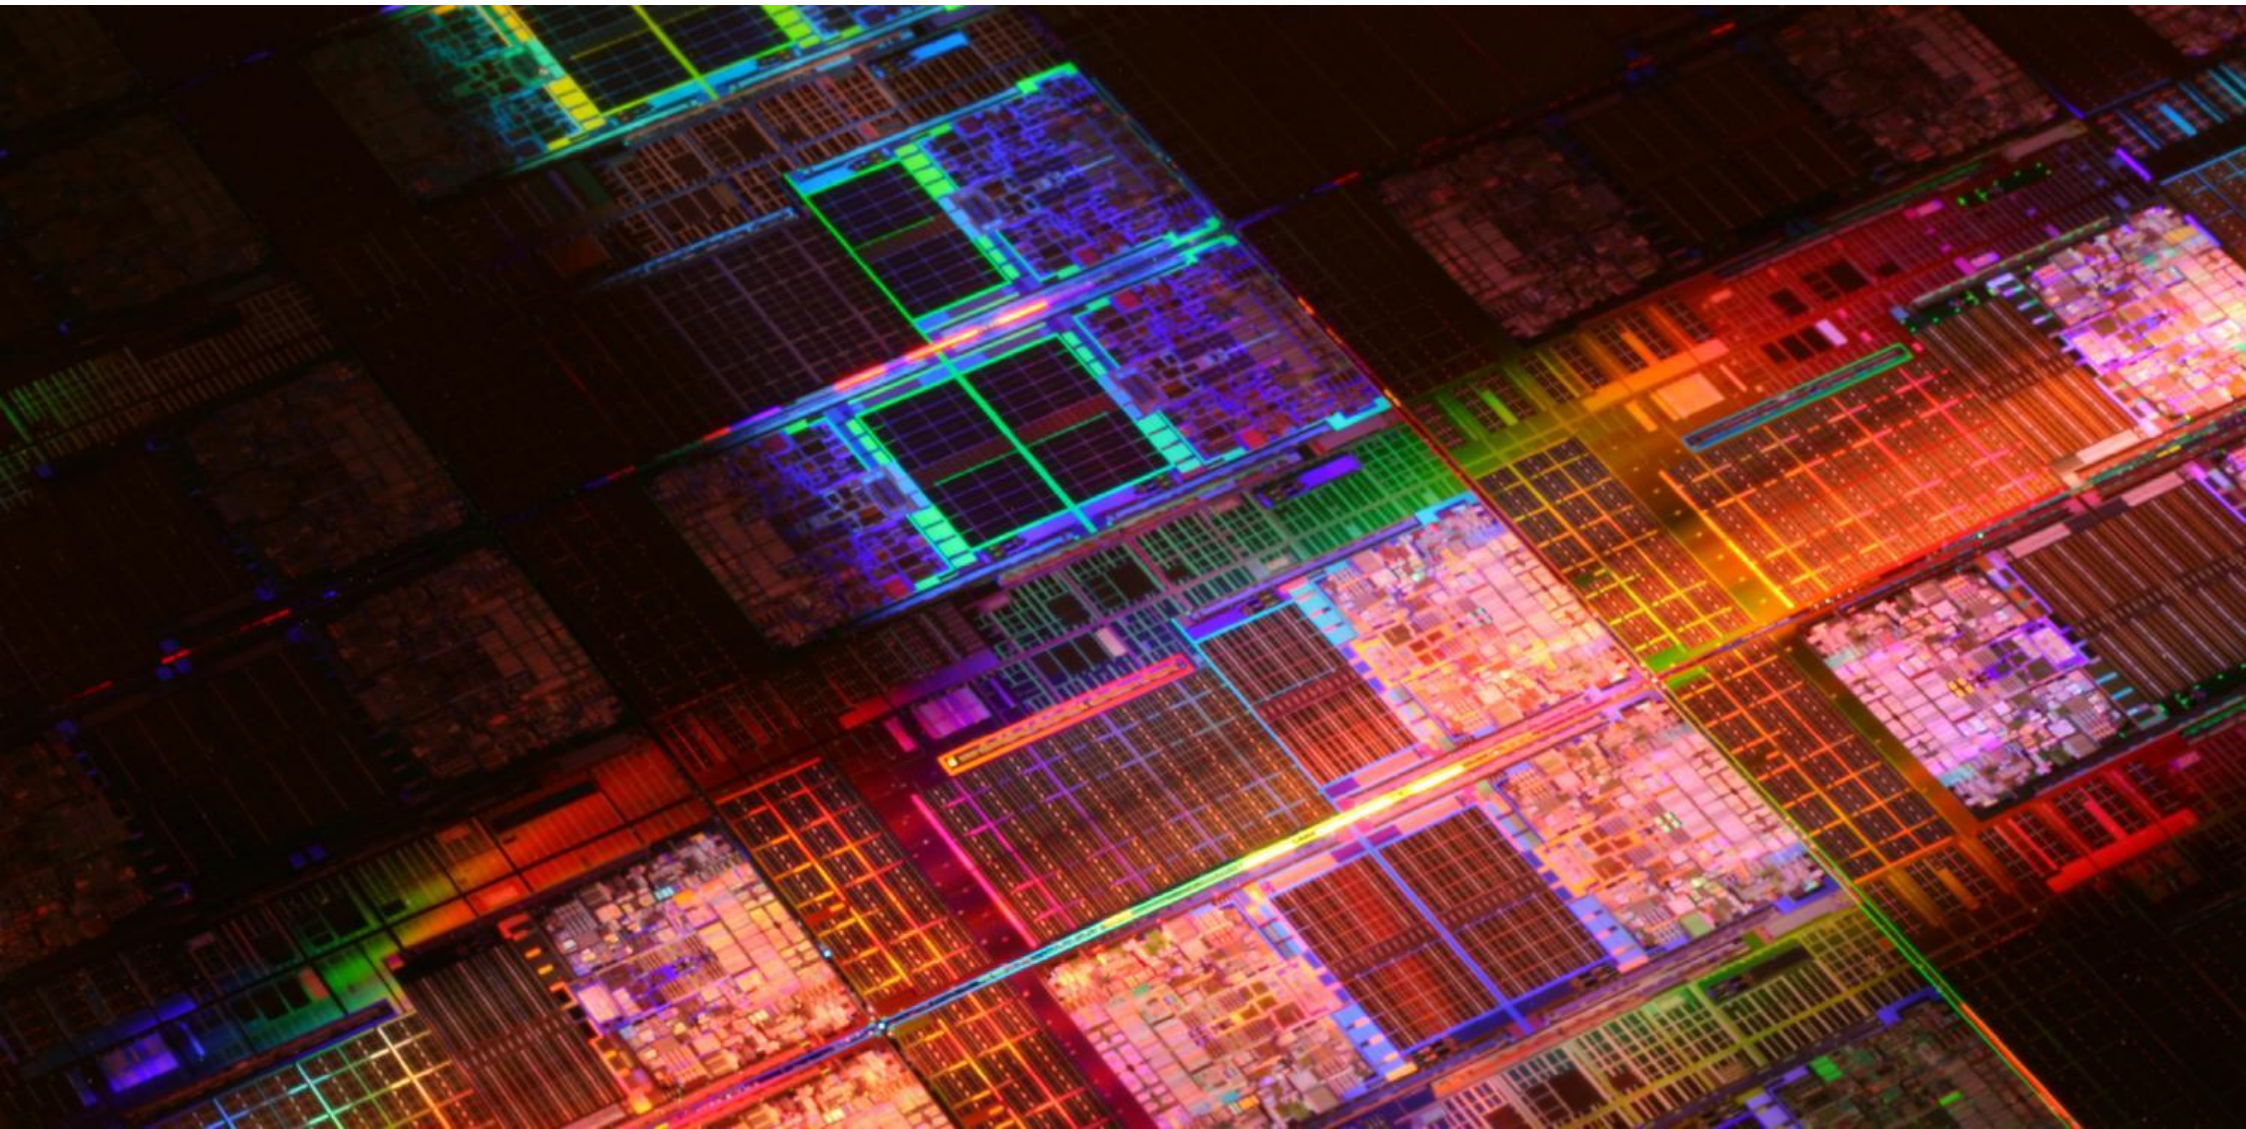

«INTEL

inspires others with its words and deeds»

is in front of technology, ideas and initiatives»

is respectful of all people»

creates opportunities»

The Intel brand elements

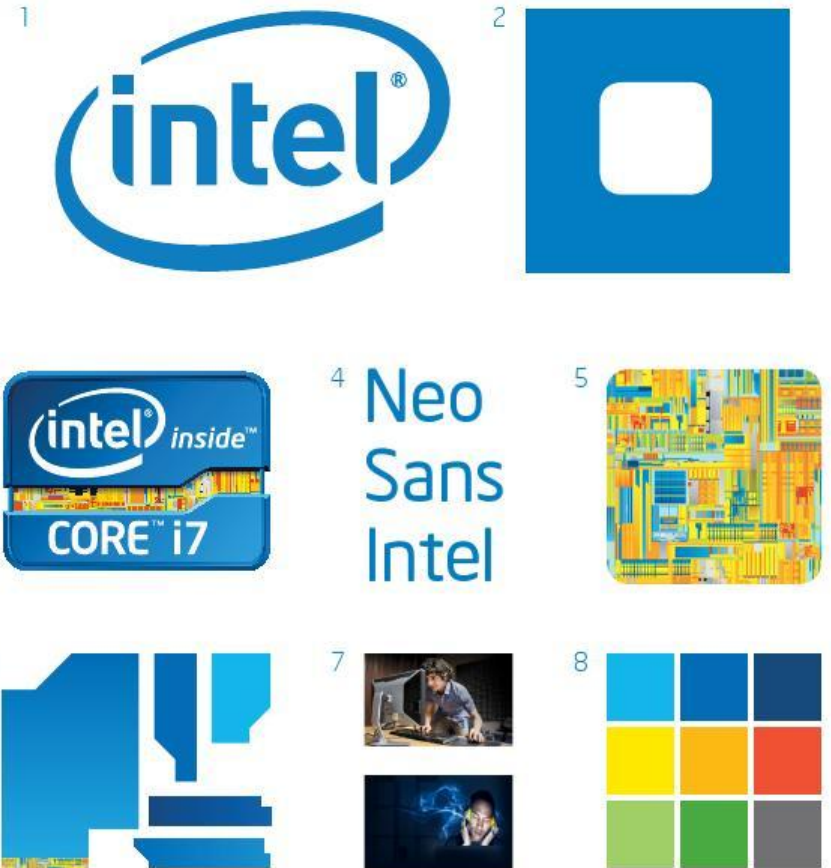

Welcome to the Brand Identity Elements section. What are Brand Identity Elements? Put simply, they are the pieces of the visual system that bring the Die'namic Signature Style to life. These can change from something as simple as our Intel corporate font, Neo Sans Intel, all the way to the complex, yet beautiful graphic Die.

When used throughout all of our communications, the Brand Identity Elements work together with our Intel voice to help our Brand stand out and be recognized among the clutter and noise.

Through imprudent exposure to each of the Brand Identity Elements, our audiences will come to associate them with Intel as they become iconic metaphors for the Brand.

We use these tools to amplify our message.

- 1 Logo
- 2 Basic colors
- 3 Core design
- 4 Typography
- 5 Die'namic Signature
- 6 Graphic elements
- 7 Imagery
- 8 Color palette

The Intel logo

Our original logo was a defining part of our past and has since evolved into a new symbol of our brand today.

1969-2005

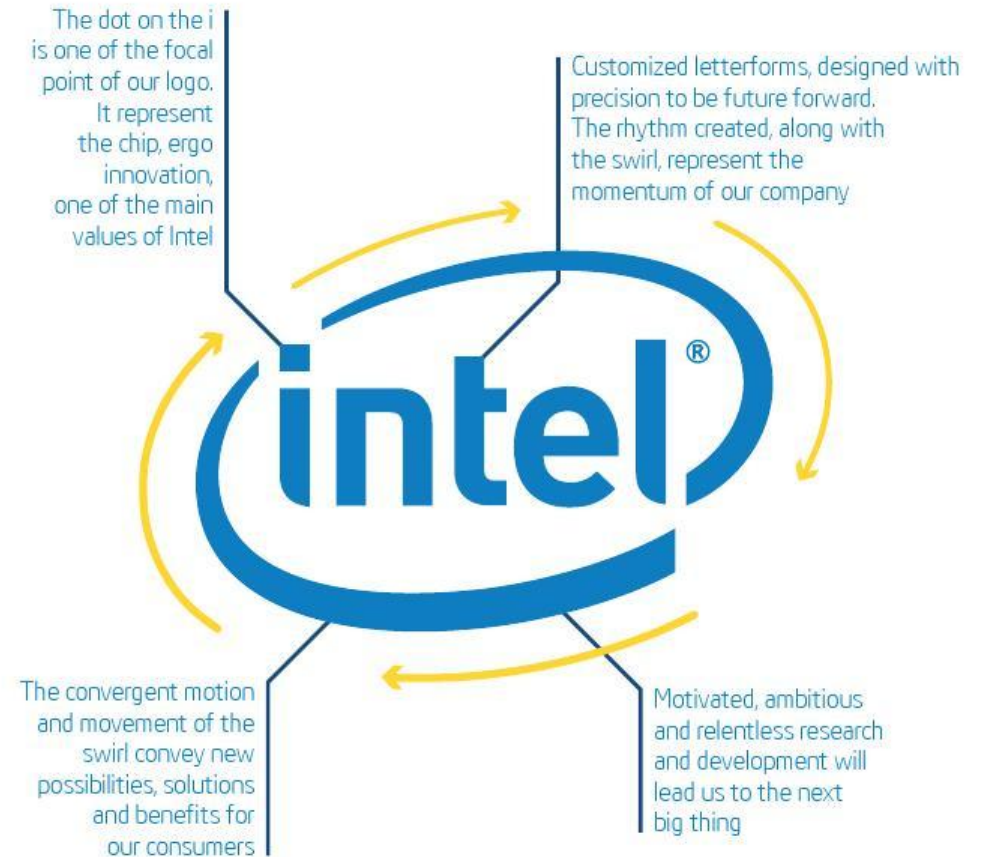

Designed by an Intel employee in 1969, the name was derived from "Integrated electronics".

The distinctive aspect was the "dropped e", which remains in the successive Intel Inside logo.

1991-2005

Along with the company logo, in 1991 the Intel Inside logo made its appearance in ads and on PCs worldwide.

It was part of a marketing campaign to help users identify PCs based on Intel processors.

The Intel logo usage

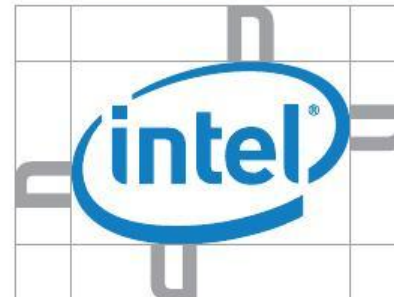

To achieve the desired Brand consistency, and ensure Intel image is well perceived whichever the environment is, we provide these additional guidelines regarding our logo specifications and restrictions. Thank you for your contribution to this effort.

- **CLEAR SPACE**
- **MAXIMUM SIZE**
- **MINIMUM SIZE**
- **COLOR USAGE**
- **BACKGROUNDS**
- **IMPROPER USE**

CLEAR SPACE

Give it space. To preserve the integrity and visual impact of the Intel logo, always maintain adequate clear space around it. The clear space around the logo is an integral part of its design, and ensures the logo can be seen quickly, uncluttered by other logos, symbols, artwork, or text.

CLEAR SPACE AROUND THE INTEL LOGO EQUAL TO THE HEIGHT OF THE "N" IN INTEL

MAXIMUM SIZE

There is no maximum size for Intel logo usage. However, when using the Intel logo at very large sizes you will need to adjust the size and position of the ® symbol. The ® symbol should be reduced and repositioned closer to the Intel logo so it is legible but unobtrusive.

MINIMUM SIZE

The minimum size for use of the Intel logo in most environments is 2.54 cm or 1.00". Minimum size is measured from the outside edges of the "swirl".

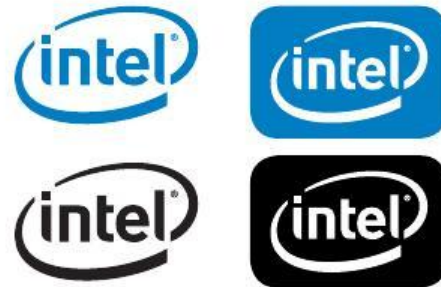

The Intel logo usage

COLOR USAGE

Approved colors for the Intel logo are:

- Intel blue (refer to our color palette) on white background
- Reversed to white out of a high contrast background (50% or darker)
- Black on white background

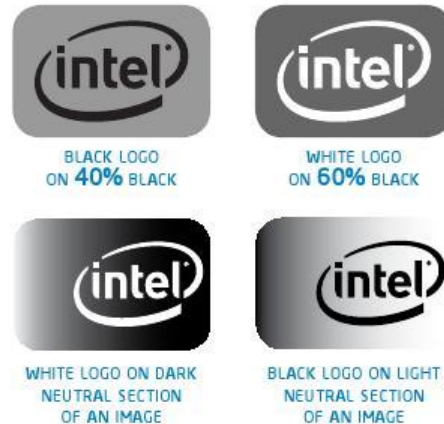

BACKGROUNDS

The Intel® logo should always appear on a clean, clear solid background. The background should provide high contrast to the Intel logo color (example: value equivalent to 50% black or darker if using a white Intel logo).

If placing the Intel logo on a photograph, the area where the logo is positioned needs to be clear of any patterns and variations of color.

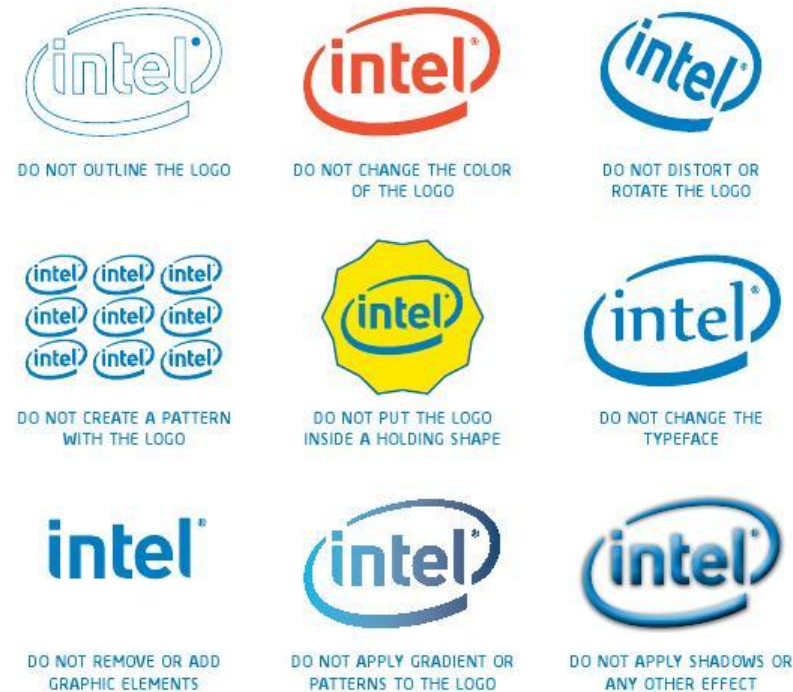

Intel blue logo is meant to be used JUST on white backgrounds.

IMPROPER USE

Improper use of the Intel® logo lessens its value as a recognizable visual entity. The following examples demonstrate inappropriate or unacceptable usage of our Intel logo.

These kinds of applications weaken our brand and negatively impact the value of Intel.

Color palette

Color is the most fundamental yet most powerful tool in creating or expressing a mood or feeling, and it plays an important role in representing the Intel brand. Color used simply and with balance can communicate clarity, consistency, and modern sophistication. We want our color system to reflect a bold, dynamic, multi-dimensional Intel.

We defined a new "Intel blue" as our core color, which embraces and represents Intel values and philosophy, as well as making it immediately distinguishable.

Along with the Intel blue, is highly recommended to use plain white when creating a duo-tone graphic element.

Grey could be a good alternative to black or white when creating body text.

Intel blue	Pure white
	
Pantone 285C R: 0 G: 125 B: 196 C: 89 M: 43 Y: 0 K: 0 #007DC3	No Pantone R: 255 G: 255 B: 255 C: 0 M: 0 Y: 0 K: 0 #FFFFFF

	Pantone: Cool grey C11 R: 113 C: 0 #71 G: 112 M: 2 70 B: 115 Y: 0 73 K: 68
---	--

Our color palette is enriched by these secondary colors which will help our communication reach its intended target, maintaining the Intel tone of voice.

We provide you three ulterior tones of blue, to be used in plain tint or into linear gradient fills. Gradient fills might come in handy when using graphic elements like icons or bounding boxes. There shouldn't be used lighter nor darker shades of blue as the ones provided in this color palette.

The other colors are totally synergic with our Die'namic Signature and, added to our blues, will make our communication smarter, giving it vibrance and enthusiasm. Use them to create additional graphic elements, but remember that blue has to be the dominating color.

Typography

The type you use tells a story, and becomes critical when creating clear and effective brand communication. The right typeface, used consistently, builds character.

Neo Sans Intel is our official typeface, tailored specifically to the Intel brand. It fuses modern basic forms with universal functionality, making our information clear, organized, outstanding. Our typeface comes in three weights - light, regular, medium - in order to maximize its versatility and create distinction across all corporate-wide and sub-brand communications.

Default to Verdana if Neo Sans is not available. Instances where Neo Sans could be not available are, for example, on the web, in emails or in documents created in Microsoft Office applications.

Body text
Neo Sans Intel, regular - 9.5/11.5 pt
Emphasize with medium

Leading / tracking

As a general rule of thumb: the smaller the point size, the larger the leading; the higher the point size, the tighter the leading. Leading should be set between 100 to 140% of the point size. When using Neo Sans Intel, auto or metric kerning is recommended. As a general rule, keep tracking set to zero between 9 and 12 points. Set to -8 starting from 30 points.

9 PT. / LEADING: 12.6 / TRACKING: 0

CREATING A DIE'NAMIC SIGNATURE STYLE AROUND THE WORLD

The world according to Intel.
Our Die'namic Strip holds it together.

In the next chapter we'll discover how
our Die'namic Signature Style blends
into Intel Brand Identity and helps
enhancing our idea of a company
constantly looking forward to
improving and discovering.

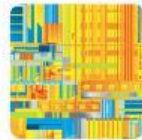

The Die'namic Signature Style

Think of what makes a computer brilliant, the element that is vital to any technological device and helps to achieve top performances. You're thinking of a high-end processor, the electronic brain that makes everything possible.

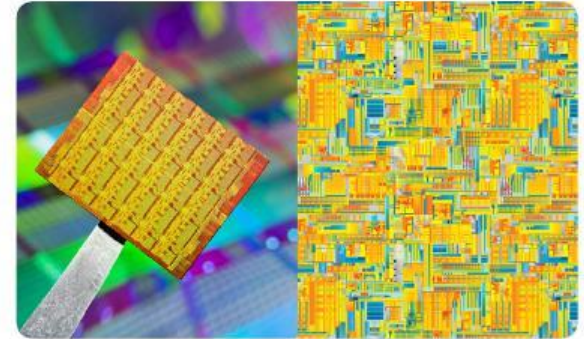

Whenever you think of Intel, you think of the best processors powering the best PCs or server workstations. We want to go beyond the processor itself, and bind Intel Brand essence to its ultimate thinking component: the circuit Die.

The combination of Die and dynamism leads to Die'namism, a winning formula embracing the spirit of a smart, zippy component, the core element of our new Brand Identity.

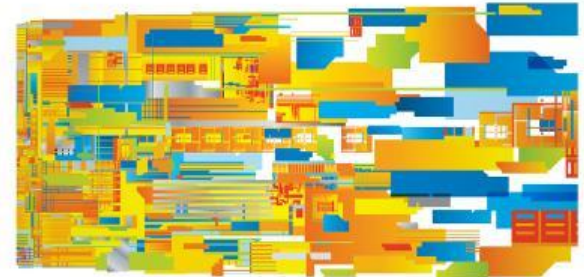

Here is how we drew inspiration from a chip. Refer to the next sections to find out how and where to use it.

Drawing inspiration directly from the Intel processor chip, we developed the core element of the new brand identity, The Die'namic Signature Style.

Here is how we built the Graphic Die. Breaking this pattern apart reveals the shapes that form Intel's Die'namic Signature Style.

Graphic elements

These Die'namic Shapes come straight out of the Graphic Die itself. They form a visual system which can be used to frame or hold text or content. They are unique to Intel and should be used as often as possible, as the thread of continuity across all communications.

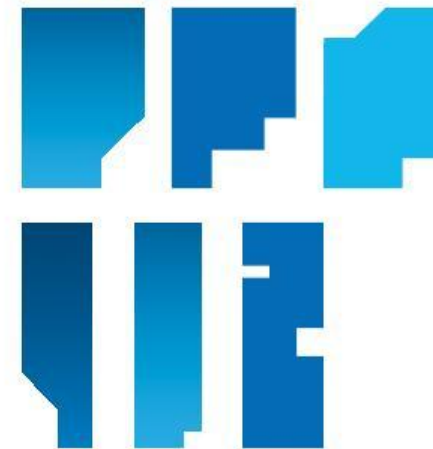

We divided the Shapes in two groups: vertical and horizontal. Be creative. Use combinations of two or three overlapping shapes to create unique layouts. Feel free to rotate and flip them; make a wise use of color and discover infinite visual possibilities.

Some Die'namic Shapes are accompanied by a Graphic Die Strip which ties the shapes back to the Die.

TIPS:

- COMBINE THE SHAPES OVERLAPPING A SMALLER ONE OVER THE EDGE OF A BIGGER ONE
- ROTATE THE SHAPES. STICK TO MULTIPLES OF 90°
- FLIP SHAPES HORIZONTALLY AND VERTICALLY
- APPLY A DIE'NAMIC STRIP TO THE SHORTER SIDE OF THE BIGGEST SHAPE
- THE COLOR SCHEME IS BLUE AND ITS GRADATIONS. USE THE SUGGESTED SOLUTIONS

VERTICAL SHAPES

HORIZONTAL SHAPES

DIE'NAMIC SHAPES LAYOUTS

Imagery

Now that you've been introduced to the Die'namic Signature Style, the Graphic Die and Shapes, we're ready to find out what kind of shots and photographs are synergic to Intel brand identity.

At Intel we shoot our own photography. So no matter what type of image you need, whether it's lifestyle, product shot, environmental, or technology interaction, you should be able to find the visual assets you are looking for.

We grouped Intel imagery into three major categories: people, environmental and product, each one with a distinctive aim and message to convey. Follow the guidelines and support Intel brand identity with stunning images.

People imagery

People images reference Intel staff and the individuals and groups that Intel reaches, including members and users.

People are captured in casual business attire, working on a computer, or engaged in an activity. At times, they can be looking at the camera to create an immediate connection with the reader.

IEEE also strives to highlight diversity, reflecting the global and cross-cultural nature of the organization. The images can be either portraits or group photos and should reinforce the idea of Intel as a global community. People images can be photojournalistic style or silhouettes and should be used in color whenever possible.

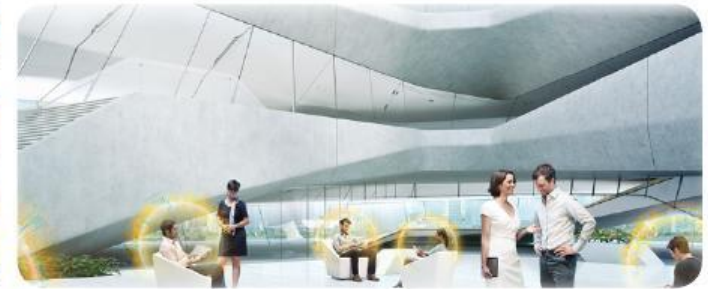

Environmental imagery

Environmental imagery for Intel should share the same qualities of lifestyle imagery, only opened up to capture a larger sense of place.

No matter what you are shooting - a street scene bursting with motion, a city scape full of people, or a serene shot of people in a landscape, never lose sight of the Intel promise: we want to enrich the lives of every person on earth by creating new technology and removing the barriers to communication.

Product imagery

Make the product the hero.

Product imagery should always be innovative and engaging, while emphasizing the high quality of Intel products. Images should convey a premium look, with dynamic, vivid contrast, and sharpness in the details.

Here the Die'namic Signature Style touch becomes predominant: showing a colorful wave bursting out of an Intel product will be the unique way to signal that that product is Intel Inside.

Design application

So, how do you apply these brand elements in the real world of Intel communications? First, know your audience. Second, stay flexible. Third, be inspired.

Keep it simple. Most of Intel communications consist in a dominant image which is relevant to the message you need to convey, or use a collection of images that combine to tell a compelling story and bring the topic of your communication to life.

Type and logo should be put into a large clear or dark section, like a banner to the side of the visual part of the communication.

Otherwise use the Die'namic Signature Style to create holding shape for text or logo.

Please refer to the examples provided.
